

CHAPTER V

CONCLUSIONS AND RECOMMENDATIONS

This chapter presents conclusions and recommendations based on the data interpretation and analysis from the previous chapter. The research conclusion that the use of audio visual aid can help to improve students' speaking skill as mentioned in the previous discussion. Then recommendations are referred to the teacher and other researcher for next study.

5.1 Conclusions

From the findings and discussion of the research, conclusions can be drawn that the use of audio visual aid as media in teaching speaking is only aid and not substitute for the teacher. It can help the teacher in providing interesting teaching material as long as the teacher makes full use of it. Then, teacher's role is to choose appropriate material and video and how it is to be used. While using audio visual aid, teacher should provide varieties activities as the follow up of watching the video to enhance the students in practicing their speaking.

The use of audio visual aid in teaching speaking can help the students in improving their speaking skill. It can be seen from the data gained in the research. From observation, it showed that the students involved actively in the learning process. Then students' response toward the use of audio visual aid is ascertained through questionnaire. It reveals that they felt audio visual aid such as video and film can encourage them to learn and make them more understand to the material. In addition, the data from interview show that the use of audio visual aid can stimulate them to speak in the class and become the role model for their speaking.

Besides that, data from test also show that there is improvement in their speaking skill. They can use some expressions in appropriate manner of speaking.

5.2 Recommendation

There are some recommendations that might be useful for improvement in the next research as follow.

1. For teacher

The teachers who use of audio visual aid in the class should be well prepared and well organized before using it in delivering material. It can require teaching and learning process effectively. Then, teachers should design interesting activities that can enable the students to practice the material more in the class. So it can motivate and encourage them to learn.

2. For researcher

The use of audio visual aid can be applied in any level of school. It also can be used for teaching other skill such as listening and writing. Furthermore the researcher can use audio visual aid in teaching different kinds of genre text.
