PERNYATAAN

Dengan ini saya menyatakan bahwa skripsi saya yang berjudul “**Sintesis dan Karakterisasi Hidrogel PVA/GA/POM/CNT, dan Uji Kinerjanya sebagai Material S-CRF NaCl dan S-CRF KCl**” beserta seluruh isinya adalah sepenuhnya karya saya sendiri. Saya tidak melakukan penjiplakan atau pengutipan dengan cara-cara yang tidak sesuai dengan etika ilmu yang berlaku dalam masyarakat keilmuan. Atas pernyataan ini, saya siap menanggung risiko/sanksi yang dijatuhkan kepada saya apabila di kemudian hari ditemukan adanya pelanggaran etika keilmuan atau ada klaim dari pihak lain terhadap keaslian karya saya ini.

KATA PENGANTAR

Segala puji dan syukur penulis panjatkan kehadirat Allah SWT yang telah memberikan berkat, rahmat, dan izinNya sehingga penulis dapat menyelesaikan skripsi yang berjudul **“Sintesis dan Karakterisasi Hidrogel PVA/GA/POM/CNT, dan Uji Kinerjanya sebagai Material S-CRF NaCl dan S-CRF KCl”**. Shalawat serta salam semoga tercurah limpahkan kepada Nabi Muhammad SAW., keluarganya, para sahabatnya, serta umatnya hingga akhir zaman.

Skripsi ini disusun dengan tujuan untuk memenuhi salah satu syarat dalam memperoleh gelar Sarjana Sains pada Program Studi Kimia. Dalam penulisan skripsi ini, tidak lepas dari hambatan dan kesulitan, namun berkat bimbingan, masukan, bantuan, dan dukungan dari berbagai pihak, segala hambatan dan kesulitan dapat teratasi dengan baik.

Penulis menyadari bahwa masih banyak kekurangan baik dari segi penyusunan, tata bahasa, maupun dari segi lainnya dalam penulisan skripsi. Oleh karena itu, penulis mengharapkan kritik dan saran yang membangun guna menjadi acuan di waktu mendatang. Semoga skripsi ini memberikan informasi yang bermanfaat dalam pengembangan wawasan dan peningkatan ilmu pengetahuan di masa mendatang.

UCAPAN TERIMA KASIH

Segala puji dan syukur penulis panjatkan kehadirat Allah SWT yang telah memberikan berkat, rahmat, dan izinNya sehingga penulis dapat menyelesaikan skripsi ini sebagai salah satu syarat mendapatkan gelar sarjana Sains. Shalawat serta salam semoga senantiasa tercurah limpahkan kepada Nabi Muhammad SAW., keluarganya, para sahabatnya, serta umatnya hingga akhir zaman.

Selama penelitian dan penyusunan skripsi ini, tidak lepas dari bimbingan, masukan, bantuan, dan dukungan yang berharga dari berbagai pihak baik secara langsung maupun tidak langsung sehingga skripsi ini dapat terselesaikan. Oleh karena itu, penulis menyampaikan ucapan terima kasih kepada:

1. Kedua orang tua, kedua adik, dan seluruh keluarga besar yang selalu memberikan doa, kasih sayang, dan berbagai bentuk dukungan baik moril maupun materil kepada penulis.
2. Bapak Dr. Hendrawan, M.Si. selaku pembimbing I yang telah memberikan banyak waktu untuk bimbingan, berbagi ilmu, saran, motivasi, dan doa kepada penulis selama penelitian dan penyelesaian skripsi.
3. Ibu Prof. Fitri Khoerunnisa, Ph.D. selaku pembimbing II sekaligus ketua program studi kimia yang telah membimbing, memberikan dukungan, serta doa kepada penulis selama penelitian skripsi.
4. Bapak Prof. Dr. Eng. Asep Bayu Dani Nandiyanto. S.T. M. Eng. selaku pembimbing akademik yang telah memberikan nasihat, motivasi, serta doa kepada penulis selama proses studi.
5. Bapak Drs. Yaya Sonjaya, M.Si. selaku ketua Kelompok Bidang Kajian Kimia Lingkungan yang telah memberikan banyak ilmu dan motivasi selama proses studi.
6. Seluruh dosen, staf, dan laboran Program Studi Kimia yang telah memberikan banyak ilmu, motivasi, dan memberikan pelayanan terbaik kepada penulis selama proses studi dan penyelesaian skripsi.
7. Seluruh rekan-rekan kimia angkatan 2019, khususnya rekan-rekan kimia 2019-D, dan KBK kimia lingkungan yang telah kebersamai penulis selama proses studi.

8. Kanthi Pawening Tyas, Dita Ayu Rosmawati, dan Diah Indriati selaku rekan seperjuangan yang telah kebersamai, mendukung, dan saling memotivasi penulis selama penelitian.
9. Fitri Febriyanti, Intan Yustia, Lydzikri Astuti, Tria Nurwina, Tufatul Maidah, dan Fatihah Tasyakurnisa sebagai teman-teman yang telah memberikan dukungan kepada penulis, tempat berbagi rasa, dan saling menguatkan selama proses studi.
10. Semua pihak yang telah membantu penulis selama melaksanakan penelitian hingga penulisan skripsi ini dapat diselesaikan.

Semoga Tuhan Yang Maha Esa selalu memberikan perlindungan dan membalas semua kebaikan yang sudah diberikan kepada penulis.

ABSTRAK

Upaya praktek pertanian ramah lingkungan telah banyak dilakukan untuk meningkatkan efektivitas pemupukan dan mengurangi dampaknya pada lingkungan. Penggunaan hidrogel sebagai material *slow-controlled release fertilizer* (S-CRF) dapat menjadi solusi dari permasalahan tersebut. Penelitian ini bertujuan untuk mengetahui kondisi optimum sintesis, karakterisasi, dan uji kinerja hidrogel dari polivinil alkohol (PVA), glutaraldehid (GA), *Premna oblongifolia Merr* (POM), dan *carbon nanotubes* (CNT). Tahapan penelitian terdiri atas (1) sintesis hidrogel PVA/GA/POM dan PVA/GA/POM/CNT; (2) karakterisasi gugus fungsi, morfologi, dan hidrofilitas; dan (3) kinerja hidrogel *swelling ratio*, *water retention*, porositas, absorpsi dan desorpsi ion natrium dan kalium. Konsentrasi PVA(%) optimum adalah 3% dengan komposisi volume optimum PVA/GA/POM adalah 15:7,5:15 dan PVA/GA/POM/CNT adalah 15:7,5:15:7. Sisa asam hidrogel dibersihkan dengan baik pada pencucian ketiga dan keempat. Spektra FTIR hidrogel PVA/GA/POM/CNT menunjukkan peningkatan dan pergeseran serapan gugus O-H, CH₂, dan C-O-C. Foto SEM hidrogel PVA/GA/POM/CNT memiliki struktur yang lebih berpori dan kasar dibandingkan PVA/GA/POM. Hidrogel PVA/GA/POM/CNT memiliki sudut kontak lebih kecil yaitu 43,27° sedangkan PVA/GA/POM yaitu 48,27°. Hidrogel PVA/GA/POM/CNT memiliki *swelling ratio* lebih besar yaitu 1076% dibandingkan PVA/GA/POM yaitu 675%. Uji *water retention* pada jam ke-48 menunjukkan bahwa hidrogel PVA/GA/POM/CNT mampu mempertahankan air lebih banyak yaitu 3,39% sedangkan PVA/GA/POM yaitu 0,43%. Uji porositas hidrogel PVA/GA/POM/CNT memiliki kapasitas absorpsi lebih besar yaitu 76,71% daripada PVA/GA/POM yaitu 66,85%. Uji absorpsi mengindikasikan bahwa semakin besar konsentrasi larutan NaCl dan KCl maka semakin besar ion yang terabsorpsi dan absorpsi hidrogel terhadap KCl lebih besar dibandingkan NaCl. Hidrogel PVA/GA/POM/CNT mendesorpsi NaCl dan KCl lebih besar dibandingkan PVA/GA/POM dan desorpsi KCl lebih cepat daripada NaCl.

Kata Kunci : *slow-controlled release fertilizer*, polivinil alkohol, POM, CNT, glutaraldehid.

ABSTRACT

Efforts to practice eco-friendly agriculture have been carried out to increase the effectiveness of fertilization and reduce its impact on the environment. The use of hydrogel as a slow-controlled release fertilizer (S-CRF) material can be a solution to this problem. This study aims to determine the optimum conditions for synthesis, characterization, and hydrogel performance tests of polyvinyl alcohol (PVA), glutaraldehyde (GA), Premna oblongifolia Merr (POM), and carbon nanotubes (CNT). The research stages consisted of (1) synthesis of PVA/GA/POM and PVA/GA/POM/CNT hydrogels; (2) characterization of functional groups, morphology and hydrophilicity; and (3) hydrogel performance test consists of swelling ratio, water retention, porosity, absorption and desorption of sodium and potassium ions. The optimum concentration of PVA(%) is 3% with the optimum volume (mL) composition of PVA/GA/POM is 15:7,5:15 and PVA/GA/POM/CNT is 15:7,5:15:7. Residual hydrogel acid was removed well in the third and fourth washes. The FTIR spectra of PVA/GA/POM/CNT hydrogels show increases and shifts in the absorption of the O-H, CH₂, and C-O-C groups. SEM photo of PVA/GA/POM/CNT hydrogel has more porous and rough structure than PVA/GA/POM. PVA/GA/POM/CNT hydrogel has a smaller contact angle of 43.27° while PVA/GA/POM is 48.27°. PVA/GA/POM/CNT hydrogel has a greater swelling ratio of 1076% compared to PVA/GA/POM which is 675%. The results of water retention test at 48 hours shows that the PVA/GA/POM/CNT hydrogel is able to retain more water, namely 3.39%, while PVA/GA/POM is 0.43%. The PVA/GA/POM/CNT hydrogel porosity test has greater absorption capacity of 76.71% than PVA/GA/POM which is 66.85%. The absorption test indicated that the greater the concentration of NaCl and KCl solutions, the greater the adsorbed ions and the hydrogel absorption of KCl is greater than that of NaCl. PVA/GA/POM/CNT hydrogels desorps NaCl and KCl more than PVA/GA/POM and KCl desorption faster than NaCl.

Keywords : *slow-controlled release fertilizer, polyvinyl alcohol, POM, CNT, glutaraldehyde.*
