ABSTRACT

Dita Permata Aulia (1906190), *The Effect of Social Support on Perceived Future Employability among Final Year Students in the City of Bandung*. Thesis. Psychology Study Program, Faculty of Education, Indonesian University of Education, Bandung (2024).

The purpose of this study is to understand the effect of social support on perceived future employability among final year students in the City of Bandung. The research subjects in this study are final year students in the City of Bandung (N = 404). The sampling technique used in this study is probability convenience sampling. The formula for determining the minimum sample size in this study uses the tables of Isaac and Michael, with a minimum number of respondents of 349 and a 5% error rate. The instruments used to measure social support are an adapted version of The Multidimensional Scale of Perceived Social Support (MSPSS) by Sinndy (2019) and the Perceived Future Employability Scale (PFES) which has been translated by Matius and Gunawan (2022). The data collection process was conducted both online and offline by distributing questionnaire links through social media and directly through gadgets on campus. Data analysis in this study used simple linear regression test with the help of SPSS software version 25.0 for windows. The results showed that there was a significant influence ($\alpha = 0.062$) of social support on perceived future employability, with a coefficient level of 1.353.
