## **PERNYATAAN**

Dengan ini saya menyatakan bahwa skripsi dengan judul “Sintesis dan Karakterisasi DES Terner Berbasis Kolin Klorida dan Aplikasinya dalam Pelindian Logam Perak dari Limbah *Printed Circuit Board*” ini beserta seluruh isinya adalah benar-benar karya saya sendiri. Saya tidak melakukan penjiplakan atau pengutipan dengan cara-cara yang tidak sesuai dengan etika ilmu yang berlaku dalam masyarakat keilmuan. Atas pernyataan ini, saya siap menanggung risiko/sanksi apabila di kemudian hari ditemukan adanya pelanggaran etika keilmuan atau ada klaim dari pihak lain terhadap keaslian karya saya ini.

Bandung, 1 Agustus 2024

## KATA PENGANTAR

Dengan penuh rasa syukur dan kerendahan hati, penulis panjatkan puji syukur kepada Allah SWT atas segala anugerah dan berkatnya yang telah dilimpahkan, sehingga penulis dapat menyelesaikan skripsi yang berjudul “Sintesis dan Karakterisasi DES Terner Berbasis Kolin Klorida dan Aplikasinya dalam Pelindian Logam Perak dari Limbah *Printed Circuit Board*” sebagai salah satu syarat untuk memperoleh gelar Sarjana Sains (S.Si.) di Fakultas Pendidikan Matematika dan Ilmu Pengetahuan Alam, Program Studi Kimia, Universitas Pendidikan Indonesia.

Selama proses ini, penulis tidak hanya belajar tentang subjek yang penulis teliti, tetapi juga tentang pentingnya kerja keras dan ketekunan. Dalam setiap halaman skripsi ini, tercermin dedikasi dan dukungan yang penulis terima dari berbagai pihak, yang telah menjadi inspirasi dan pendorong utama penulis.

Penulis berharap bahwa karya ini, yang mencerminkan upaya dan perjuangan yang telah dijalani, bisa memberikan kontribusi bagi dunia akademis. Terima kasih kepada semua yang telah memberikan dukungan dan bimbingan, serta kepada pembaca yang meluangkan waktu untuk menghargai hasil karya ini. Penulis menyadari bahwa karya ini masih memiliki kekurangan dan keterbatasan. Oleh karena itu, penulis dengan hormat menerima segala bentuk kritik dan saran konstruktif dari berbagai pihak.

Bandung, 1 Agustus 2024

Penulis,

Jaaka Yarfa Alhaqqa

## UCAPAN TERIMA KASIH

Penulis panjatkan syukur yang mendalam ke hadirat Allah SWT atas segala pertolongan dan karunia-Nya sehingga penulis dapat menyelesaikan skripsi ini dengan judul “Sintesis dan Karakterisasi DES Terner Berbasis Kolin Klorida dan Aplikasinya dalam Pelindian Logam Perak dari Limbah *Printed Circuit Board*” di waktu yang tepat.

Perjalanan penulisan karya ini bukanlah perjalanan yang ditempuh seorang diri. Terdapat banyak tangan yang terluruh, banyak pikiran yang terlibat, dan banyak hati yang memberi dukungan. Untuk itu, penulis ingin menyampaikan ucapan terima kasih yang mendalam kepada pihak-pihak berikut:

1. Ibu Dr. Soja Siti Fatimah, M.Si. selaku Dosen Pembimbing Pertama dan Dosen Pembimbing Akademik, atas bimbingan, dukungan materi dan moral, dan waktu yang telah diberikan dalam membantu penulis dalam menyelesaikan penelitian ini;
2. Bapak Abraham Mora, M.Si. selaku Dosen Pembimbing Kedua, atas waktu dan saran serta kritik konstruktif dalam membantu mendesain, memperbaiki, menyempurnakan skripsi ini;
3. Ibu Dr. Fitri Khoerunnisa, M.Si., Ph.D. selaku Ketua Program Studi Kimia, Universitas Pendidikan Indonesia;
4. Bapak Dr. Budiman Anwar, M.Si. selaku Ketua Kelompok Bidang Kajian (KBK) Kimia Material, Program Studi Kimia, Universitas Pendidikan Indonesia;
5. Ibu Dr. Siti Aisyah, M.Si. selaku Kepala Laboratorium Riset Kimia. Ibu Hana Rohana, S.Ap. dan Zakiah Dzulummaah, S.Si. selaku PLP Ahli Muda dan Asisten Laboratorium Riset Kimia. Serta kepada Ibu Agnia Muftiasih, S.Si. selaku Laboran Kimia Instrumen atas kontribusi bantuan dalam mempersiapkan sampel;
6. Lailasari Melala dan Kusnendar Kurnadi selaku orang tua, yang telah memberikan kesempatan, doa, dukungan moral dan materi, dan pengertian tak pernah putus sehingga penulis dapat terus menjalani penelitian ini;

7. Nenda Apriyani Sari selaku Kakak, yang telah memberikan dukungan berupa fasilitas perangkat juga finansial sehingga penulis dapat menjalani perkuliahan dan menyelesaikan penelitian ini dengan baik. Tidak lupa penulis mengucapkan terima kasih untuk Dandy Saktilenda dan Dicky Suci Prasetya selaku kakak, atas dukungan bagi penulis;
8. Fandsya Nada Cinta selaku rekan satu kajian riset pelindian WPCB menggunakan DES, yang selalu menemani dan memberikan kritik serta saran dalam menjalani riset ini bersama;
9. Baariq Fauzaan, Sultan Nazmi, Adisti Eka, dan Gabriel Ryan selaku rekan-rekan riset dalam penelitian serumpun, atas diskusi dan pemikiran mengenai berbagai aspek penelitian ini. Tidak lupa terhadap Kezia Yulianly, Mutiara Erdiana, dan Arif Maulana yang turut menyemangati berarti dalam menyelesaikan skripsi ini;
10. Seluruh rekan seperjuangan KBK Material, Teladan 26, dan Kelas Kimia-C Angkatan 2020 Universitas Pendidikan Indonesia;
11. Seluruh petugas keamanan dan kebersihan Gedung FPMIPA A dan B; dan
12. Seluruh pihak yang tidak bisa disebutkan satu-persatu, yang telah memberikan bantuan dan dukungan dalam berbagai bentuk dan turut menyukseskan penelitian ini.

Penulis menyadari bahwa skripsi ini masih jauh dari sempurna dan banyak hal yang bisa ditingkatkan. Oleh karena itu, penulis sangat terbuka terhadap segala kritik dan saran membangun dari para pembaca dan juga pihak-pihak yang berkaitan. Akhir kata, penulis berharap skripsi ini dapat memberikan sumbangsih yang berharga terhadap dunia akademik, khususnya di kajian *deep eutectic solvent* dan daur ulang limbah elektronik, dan bisa menginspirasi penelitian-penelitian selanjutnya hingga aplikasinya di masa depan.

## ABSTRAK

Perkembangan teknologi pesat telah mendorong percepatan siklus pergantian perangkat elektronik, membuat jumlah limbah elektronik meningkat. Papan sirkuit cetak (PCB) mengandung berbagai logam bernilai mendominasi jumlah limbah elektronik. Dalam upaya pungut ulang logam yang ramah lingkungan, metode solvometalurgi menggunakan *deep eutectic solvent* (DES) dapat diterapkan. Tujuan penelitian adalah untuk mengembangkan DES terner berbasis HBA kolin klorida dengan komponen HBD etilen glikol–asam sitrat (TDES 1) dan asam oksalat–asam sitrat (TDES 2), untuk pelindian logam perak. Metode penelitian diawali dengan sintesis untuk memperoleh rasio molar TDES terbaik, mempersiapkan sampel WPCB, menguji sifat fisik dan FTIR, dan melakukan aplikasi pelindian terhadap sampel WPCB. Hasil optimasi rasio molar menunjukkan rasio terbaik TDES 1 adalah 2:3:1 dan TDES 2 adalah 4:1:1. Uji kelarutan mengindikasikan kedua TDES bersifat polar. Nilai pH TDES 2 teramat lebih asam (0–1) dibandingkan TDES 1 (1,2020). TDES 1 dan 2 memiliki densitas masing-masing sebesar 1,2524 dan 1,2695 g/cm<sup>3</sup>. Analisis FTIR mengindikasikan adanya pembentukan ikatan hidrogen, dari pelebaran dan pergeseran daerah 3.000–3.400 cm<sup>-1</sup>. TDES 1 dan TDES 2 diaplikasikan dalam pelindian WPCB pada kondisi 120 °C, 16 jam, 500 rpm, *solid/liquid ratio* (S/L) 1/20 g/mL. Sampel awal WPCB diketahui mengandung 1,60% logam perak. Kinerja pelindian WPCB menunjukkan nilai persen pelindian logam perak TDES 1 lebih besar yaitu 76,85%, dibandingkan 48,38% untuk TDES 2. Hal tersebut dapat disebabkan viskositas TDES 2 yang terlalu tinggi. Maka, dapat disimpulkan bahwa TDES 1 memiliki kinerja pelindian lebih tinggi untuk logam perak pada kondisi pelindian yang sama. DES terner dapat digunakan sebagai pelarut pelindian logam berharga dari sumber sekunder berpotensi menjadi solusi untuk penurunan cadangan material global dan mendukung pencapaian Tujuan Pembangunan Berkelanjutan (SDGs).

**Kata kunci:** DES terner, kolin klorida, logam perak, pelindian, *printed circuit board*.

## ***ABSTRACT***

*Rapid technological developments have accelerated the replacement cycle of electronic devices, increasing the amount of electronic waste. Printed circuit boards (PCBs) containing various valuable metals dominate the amount of electronic waste. The solvometallurgy method, which uses deep eutectic solvent (DES), can be applied to recover environmentally friendly metals. The purpose of this study was to develop a ternary DES based on HBA choline chloride with HBD components ethylene glycol–citric acid (TDES 1) and oxalic acid–citric acid (TDES 2), for leaching silver metal. The research method began with synthesis to obtain the best TDES molar ratio, preparing WPCB samples, testing physical properties and FTIR, and conducting leaching applications on WPCB samples. The results of the molar ratio optimization showed that the best ratio of TDES 1 was 2:3:1 and TDES 2 was 4:1:1. Solubility tests indicated that both TDES were polar. The pH value of TDES 2 was observed to be more acidic (0–1) than TDES 1 (1.2020). TDES 1 and 2 have densities of 1.2524 and 1.2695 g/cm<sup>3</sup>, respectively. FTIR analysis indicated the formation of hydrogen bonds, from the broadening and shifting of the 3,000–3,400 cm<sup>-1</sup> region. TDES 1 and TDES 2 were applied in WPCB leaching at 120 °C, 16 hours, 500 rpm, solid/liquid ratio (S/L) 1/20 g/mL. The initial WPCB sample was known to contain 1.60% silver metal. The WPCB leaching performance showed a higher percentage of silver metal leaching value of TDES 1, 76.85%, compared to 48.38% for TDES 2. This could be due to the viscosity of TDES 2 being too high. Therefore, it can be concluded that TDES 1 has a higher leaching performance for silver metal at the same leaching conditions. Ternary DES can be used as a solvent for leaching valuable metals from secondary sources, potentially becoming a solution for the decline in global material reserves and supporting the achievement of Sustainable Development Goals (SDGs).*

**Keywords:** choline chloride, silver metal, leaching, printed circuit board, ternary DES
