KATA PENGANTAR

Alhamdulillah, puji syukur ke hadirat Allah SWT yang telah memberikan segala berkat dan nikmat-Nya sehingga penulis dapat menyelesaikan tesis yang berjudul “Peningkatan Kemampuan Komunikasi Matematis Siswa SMP dengan Model *Problem-based Learning* Berbantuan *Artificial Intelligence* Ditinjau dari *Adversity Quotient*”. Kemampuan komunikasi matematis sangat penting untuk dikaji karena kemampuan komunikasi matematis dapat menggambarkan penguasaan siswa terhadap kemampuan matematis lainnya. Faktor *Adversity Quotient* juga penting untuk dikaji lebih dalam karena mempengaruhi ketahanan siswa dalam menghadapi suatu tantangan dalam pembelajaran. Penulis menyadari dalam penulisan tesis ini masih terdapat kekurangan. Oleh karena itu, penulis mengharapkan kritik dan saran yang membangun dari pembaca agar tesis ini dapat disempurnakan.

Bandung, November 2025

UCAPAN TERIMA KASIH

Alhamdulillah, puji syukur ke hadirat Allah SWT yang telah memberikan segala berkat dan nikmat-Nya sehingga penulis dapat menyelesaikan tesis yang berjudul “Peningkatan Kemampuan Komunikasi Matematis Siswa SMP dengan Model *Problem-based Learning* Berbantuan *Artificial Intelligence* Ditinjau dari *Adversity Quotient*”. Shalawat serta salam senantiasa tercurah kepada junjungan Nabi besar Muhammad SAW.

Penulis menyadari bahwa tesis ini dapat diselesaikan tidak lepas dari dukungan dan bantuan berbagai pihak baik secara langsung maupun tidak langsung. Oleh karena itu, penulis berterima kasih kepada:

1. Ibu Prof. Dr. Elah Nurlaelah, M.Si. selaku dosen pembimbing akademik sekaligus pembimbing I tesis yang telah memberikan arahan, saran, motivasi, dan bersedia meluangkan waktu untuk membimbing penulis dalam perkuliahan dan menyelesaikan tesis ini.
2. Bapak Dr. H. Endang Cahya Mulyaning A, M.Si. selaku pembimbing II tesis yang telah memberikan arahan, saran, motivasi, dan bersedia meluangkan waktu untuk membimbing penulis untuk menyelesaikan tesis ini.
3. Bapak Dr. H. Jarnawi Afgani Dahlan, M.Kes. selaku Ketua Program Studi Pendidikan Matematika FPMIPA Universitas Pendidikan Indonesia.
4. Bapak dan Ibu Dosen Program Studi Pendidikan Matematika FPMIPA yang telah memberikan ilmu dan pengetahuan yang sangat berharga, sehingga memperluas wawasan serta mengembangkan cara berpikir penulis selama menempuh perkuliahan.
5. Tenaga Kependidikan Program Studi Pendidikan Matematika FPMIPA yang telah memberikan bantuan, pelayanan, dan dukungan administratif selama proses perkuliahan dan penyusunan tesis ini.
6. Kepala sekolah, wakil kurikulum, dan guru matematika yang telah mengizinkan penulis untuk melakukan penelitian, membantu, dan memfasilitasi peneliti selama pelaksanaan penelitian.

7. Orang tua dan keluarga yang memberikan doa, dukungan, dan semangat yang luar biasa kepada peneliti sehingga dapat menyelesaikan tesis ini.
8. Prof. Dr. H. Sutirna, M.Pd. yang telah memberikan dukungan, doa, serta bantuan kepada penulis sejak perkuliahan S1 hingga saat ini.
9. Teman-teman Tenggo yang telah memberikan doa dan dukungan kepada penulis sejak awal perkuliahan S1 hingga saat ini.
10. Teman-teman Open Set yang telah memberikan dukungan dan senantiasa menemani di setiap proses perkuliahan.

ABSTRAK

Yosy Candraningsih (2025). Peningkatan Kemampuan Komunikasi Matematis Siswa SMP dengan Model *Problem-Based Learning* Berbantuan *Artificial Intelligence* Ditinjau dari *Adversity Quotient*.

Penelitian ini mengkaji tentang pencapaian dan peningkatan kemampuan komunikasi matematis antara siswa yang memperoleh model *Problem-Based Learning* berbantuan *Artificial Intelligence* dan siswa yang memperoleh model *Problem-Based Learning* tanpa bantuan *Artificial Intelligence* ditinjau dari *Adversity Quotient*. Penelitian ini merupakan penelitian *quasi experimental design* dengan *pretest-posttest control group*. Populasi dalam penelitian ini merupakan siswa kelas VIII di salah satu SMP Negeri di Kabupaten Bogor. Sampel penelitian dipilih dengan teknik *purposive sampling* yang hasilnya diperoleh kelas VIII.3 sebagai kelas eksperimen dan kelas VIII.2 sebagai kelas kontrol. Teknik analisis data yang digunakan berupa uji-t dua sampel independent untuk menguji nilai *pretest*, uji ANOVA dua jalur dan uji *post hoc* untuk menguji nilai *posttest* dan nilai gain ternormalisasi. Hasil penelitian menunjukkan bahwa: (1) terdapat perbedaan pencapaian kemampuan komunikasi matematis antara siswa yang memperoleh model *Problem-based Learning* berbantuan *Artificial Intelligence* dibandingkan dengan siswa yang memperoleh model *Problem-based Learning* tanpa bantuan *Artificial Intelligence*; (2) terdapat perbedaan pencapaian kemampuan komunikasi matematis antara siswa dengan kategori *Adversity Quotient quitters-campers*, *campers*, dan *campers-climbers*; (3) tidak terdapat pengaruh interaksi antara faktor model pembelajaran dan faktor *Adversity Quotient* terhadap pencapaian kemampuan komunikasi matematis siswa; (4) terdapat perbedaan peningkatan kemampuan komunikasi matematis antara siswa yang memperoleh model *Problem-based Learning* berbantuan *Artificial Intelligence* dibandingkan dengan siswa yang memperoleh model *Problem-based Learning* tanpa bantuan *Artificial Intelligence*; (5) terdapat perbedaan peningkatan kemampuan komunikasi matematis antara siswa dengan kategori *Adversity Quotient quitters-campers*, *campers*, dan *campers-climbers*; (6) tidak terdapat pengaruh interaksi antara faktor model pembelajaran dan faktor *Adversity Quotient* terhadap peningkatan kemampuan komunikasi matematis siswa; (7) siswa pada kelas PBL-AI menunjukkan rata-rata pencapaian dan peningkatan kemampuan komunikasi matematis yang lebih tinggi dibandingkan kelas PBL-TBAI, dengan kecenderungan hasil terbaik pada siswa dengan *Adversity Quotient* kategori *Campers–Climbers*.

Kata kunci: *Adversity Quotient*, *Artificial Intelligence*, Kemampuan Komunikasi Matematis, Model *Problem-Based Learning*.

ABSTRACT

Yosy Candraningsih (2025). Improving Students' Mathematical Communication Skills through AI-Assisted Problem-Based Learning Based on Adversity Quotient.

This study investigates the effects of Artificial Intelligence-assisted Problem-Based Learning (AI-PBL) on junior high school students' mathematical communication skills, viewed from the perspective of Adversity Quotient (AQ). A quasi-experimental design with a pretest-posttest control group was employed. The participants were eighth-grade students from a public junior high school in Bogor Regency, Indonesia. Samples were selected using purposive sampling, with class VIII.3 assigned as the experimental group and class VIII.2 as the control group. Data were analyzed using an independent samples t-test for pretest results, two-way ANOVA, and post hoc tests for posttest and normalized gain scores. The findings reveal that: (1) there is a significant difference in the achievement of mathematical communication skills between students who received Artificial Intelligence-assisted Problem-Based Learning and those who received Problem-Based Learning without Artificial Intelligence; (2) there is a significant difference in the achievement of mathematical communication skills among students with different Adversity Quotient categories (quitters-campers, campers, and campers-climbers); (3) there is no significant interaction effect between learning model and Adversity Quotient on students' mathematical communication achievement; (4) there is a significant difference in the improvement of mathematical communication skills between students who received Artificial Intelligence-assisted Problem-Based Learning and those who received Problem-Based Learning without Artificial Intelligence; (5) there is a significant difference in the improvement of mathematical communication skills among students with different Adversity Quotient categories (quitters-campers, campers, and campers-climbers); and (6) there is no significant interaction effect between learning model and Adversity Quotient on the improvement of students' mathematical communication skills; (7) students in the PBL-AI class demonstrated higher average achievement and improvement in mathematical communication skills compared to those in the PBL-TBAI class, with the best results shown by students in the Campers–Climbers Adversity Quotient category.

Keyword: Adversity Quotient, Artificial Intelligence, Mathematical Communication Skills, Problem-Based Learning.
