

**PERBANDINGAN KONDISI SOSIAL
EKONOMI ANTARA PETANI PLASMA DENGAN PETANI
NON PLASMA DI KECAMATAN KERUMUTAN
(Studi kasus pada petani kelapa sawit pola PIR)**

ABSTRAK

(Popi Delima Putri, 2014)

Petani kelapa sawit di Kecamatan Kerumutan dibedakan dalam kategori petani plasma dan petani non plasma. Tujuan penelitian ini untuk melihat perbedaan kondisi Sosial Ekonomi antara Petani Plasma dan Non Plasma. Metode penelitian dengan menggunakan deskriptif komparasi. Penarikan sampel secara *Proportional sampling* dengan jumlah 95 petani Plasma dan 92 petani non plasma. Variabel bebas meliputi usia, pendapatan, pendidikan, kesehatan, dan transportasi serta variabel terikat kondisi sosial ekonomi petani plasma dan petani non plasma. Perolehan data menggunakan teknik wawancara, observasi dan studi kepustakaan. Analisis data menggunakan *Independent – sampel T Test*. Sesuai dengan kriteria pengujian hipotesis, diketahui bahwa H_0 ditolak dan H_1 diterima. Artinya terdapat perbedaan kondisi sosial ekonomi antara petani Plasma dengan Petani Non Plasma.

Kata kunci : Perbandingan, Kondisi Sosial Ekonomi, Petani Kelapa Sawit.

**THE COMPARISON OF THE CONDITION OF SOCIAL
ECONOMY BETWEEN PLASMA FARMERS AND NON
PLASMA FARMERS IN KERUMUTAN SUBDISTRICT
(a case study on oil palm farmers PIR pattern)**

ABSTRACT

(Popi Delima Putri, 2014)

Oil palm farmers in Kerumutan Subdistrict are compared based on the categorization of plasma farmers and non plasma farmers. This study is aimed to see the differences of the condition of social economy between Plasma Farmers and Non Plasma Farmers. Research methodology that is used is comparison descriptive or comparing. Determination of sample uses proportional sampling. This study involves 95 plasma farmers and 92 non plasma farmers as respondents. Research independent variable is based on age, income, education level, healthy, and transportation, while dependent variable is the condition of social economy of plasma farmers' and non plasma farmers welfare. The data is collected by using interview, observation, and literature studies and then the data is analysed by using *Independent – sampel T Test*. According to the indicator that is used, the findings show H_0 accepted and H_1 ignored, it means that there is a significant differences of the condition of social economy between plasma farmers and non plasma farmers.
