ABSTRACT

THE EFFECT OF PITCH-MATCHING EXERCISE ON STUDENT'S SINGING ACCURACY IN ELEMENTARY SCHOOL

By:

Muhamad Arif Kurniawan

In music lessons in elementary school especially in singing material, one of the problems that occurs today is the low ability of students to sing in an accurate pitch. This becomes something very important because it is one of the basic techniques in singing. One of the alternatives in helping students to be able to sing in an accurate pitch is pitch-matching exercises. This study aims to determine the effect of pitch-matching exercises in the experimental class and also to determine the effect of conventional singing learning without doing specific exercises on the student's singing accuracy in the control class., in addition to knowing the difference in improvement in both classes. The design of this study was quasi-experimental with nonequivalent control group design carried out in two elementary schools in the North Sumedang District. The sample in this study was fifth grade students with an age range of 11-12 which amounted to 30 students in the experimental class and 31 students in the control class, while the instruments used in this study were the format of assessment of singing accuracy, observation sheets of teacher performance and student activities, and field notes. Based on the results of the study, the students' accuracy in singing accuracy improved in both classes looking at the N-Gain average in the control class 0,163 and in the experimental class 0,56. However, based on the statistical test results there were differences in improvement indicating more experimental height of the control class.

Keywords: Singing, Singing Accuracy, Pitch-Matching Exercises

ABSTRAK

PENGARUH LATIHAN *PITCH-MATCHING* TERHADAP AKURASI MENYANYI SISWA SEKOLAH DASAR

Oleh:

Muhamad Arif Kurniawan

Pada pelajaran musik di sekolah dasar khususnya pada materi menyanyi, salah satu masalah yang terjadi saat ini adalah rendahnya kemampuan siswa dalam menyanyi dengan nada yang akurat. Hal ini menjadi sesuatu yang sangat penting karena merupakan salahsatu teknik dasar dalam menyanyi. Salahsatu alternatif upaya dalam membantu siswa untuk bisa menyanyi dengan nada yang akurat adalah dengan latihan pitch-matching. Penelitian ini bertujuan untuk mengetahui pengaruh latihan pitch-matching di kelas eksperimen dan juga untuk mengetahui pengaruh pembelajaran menyanyi konvensional tanpa melakukan latihan khusus terhadap akurasi menyanyi siswa di kelas kontrol, selain itu juga untuk mengetahui perbedaan peningkatan pada kedua kelas tersebut. Desain penelitian ini adalah kuasi eksperimen dengan nonequivalent control group design yang dilakukan di dua sekolah dasar yang berada di wilayah Kecamatan Sumedang Utara. Sampel pada penelitian ini adalah siswa kelas lima dengan rentang usia 11-12 yang berjumlah 30 siswa pada kelas eksperimen dan 31 siswa pada kelas kontrol, sedangkan Instrumen yang digunakan dalam penelitian ini adalah format penilaian akurasi menyanyi, lembar observasi kinerja guru dan aktivitas siswa, dan catatan lapangan. Berdasarkan hasil penelitian, kemampuan akurasi menyanyi siswa meningkat pada kedua kelas melihat rata-rata N-Gain pada kelas kontrol 0,163 dan pada kelas eksperimen 0,56 Namun, berdasarkan hasil tes statistik yang ada ada perbedaan dalam peningkatan yang mengindikasikan peningkatan kelas percobaan lebih tinggi dari kelas kontrol.

Kata Kunci: Akurasi Menyanyi, Latihan Pitch-Matching, Menyanyi
