**ABSTRAK**

Penelitian ini dilatarbelakangi oleh adanya alat penilaian praktik penggunaan *vacuum cleaner* yang belum sesuai *Standard Operational Procedure* (SOP) Hotel. Tujuan dari penelitian ini yaitu untuk memperoleh data dalam perancangan alat penilaian praktik untuk penggunaan *vacuum cleaner* berbasis *Standard Operational Procedure* (SOP) Hotel. Metode yang digunakan yaitu *Research and Development* dengan pendekatan *ADDIE*. Hasil uji kelayakan alat penilaian dinyatakan sangat layak karena perancangan dibuat secara rinci sesuai dengan prosedur kerja, sehingga dapat digunakan atau diimplementasikan. Rekomendasi dari penelitian ini ditunjukkan bagi guru mata pelajaran, diharapkan dapat menyiapkan peralatan dan perlengkapan untuk persiapan praktik penggunaan *vacuum cleaner* dan menggunakan alat penilaian praktik yang sudah dirancang sesuai dengan *Standard Operational Procedure* (SOP) Hotel. Bagi peneliti selanjutnya, diharapkan Alat penilaian praktik *vacuum cleaner* yang dirancang untuk mengukur kemampuan peserta didik dapat ditindaklanjuti dengan mengimplementasikan alat penilaian untuk penggunaan *vacuum cleaner* sesuai *Standard Operational Procedure* (SOP) Hotel.

**Kata Kunci** : Perancangan, Alat Penilaian, *Vacuum Cleaner*, *Standard Operational Procedure* (SOP)

***Design of Practical Vacuum Cleaner Performance Assessment based on the Hotel Standard Operational Procedure***

***ABSTRACT***

*This research based on the existence of an performance assessment on the practice of using a vacuum cleaner that has not been in accordance with the Hotel Standard Operational Procedure (SOP). The purpose of this study is to obtain data in designing a practice performance assessment for the use of a vacuum cleaner based on the Hotel Standard Operational Procedure (SOP). The method used is Research and Development with the ADDIE approach. The results of the feasibility test are considered very feasible because the design is made in detail in accordance with work procedures, so it can be used or implemented. Recommendations from this study are shown to subject teachers, who are expected to be able to prepare equipments to prepare for vacuum cleaner practicing and use practical performance assessment that have been designed in accordance with the Hotel Standard Operational Procedure (SOP). For the next researcher, it is expected that a vacuum cleaner practice performance assessment designed to measure the ability of students can be followed up by implementing a performance assessment for vacuum cleaner use in accordance with the Hotel Standard Operational Procedure (SOP).*
