Facilities and infrastructure are very closely related to student learning interests. Facilities and infrastructure are very supportive for the learning and teaching process, with all the facilities needed to achieve educational goals. And interest directs someone to what is liked. This study describes the contribution of the availability of facilities and infrastructure to students' interest in learning in the Building, Sanitation and Maintenance Competency Skills (KGSP) of 1 Sukabumi Vocational High School. The purpose of this study was to obtain an overview of the availability of facilities and infrastructure, an overview of students' interest in learning, and obtain contributions to the availability of facilities and infrastructure to students' learning interests. The research method used in this study is the correlational method. The instruments used in data collection were taken from the questionnaire technique. The results showed that the description of the availability of facilities and infrastructure in Building Construction, Sanitation and Maintenance Competency (KGSP) at SMK 1 Sukabumi was in the category of Not Good, and the description of students' learning interest was in the low category. Whereas the influence of the availability of facilities and infrastructures on student learning interest is quite low. The magnitude of the contribution is indicated by the correlation coefficient index = 0.396 with a 95% confidence level. The results of the $t_{count} > t_{table}$ are $2.364 > 2.042$. The amount of contribution is 15.70%.

Keywords: availability of facilities and infrastructure, interests, competence of expertise
