**ABSTRAK**

Tujuan penelitian ini untuk mengetahui pengaruh lingkungan keluarga terhadap prestasi belajar, minat belajar terhadap prestasi belajar, dan pengaruh lingkungan keluarga dan minat belajar terhadap prestasi belajar siswa kelas XI IPS SMAN 14 Bandung. Metode penelitian yang digunakan adalah metode survey. Data diolah dengan menggunakan teknik analisis korelasi multipel, sedangkan pengujian hipotesis dilakukan dengan menguji keberartian koefisien korelasi melalui uji t dan uji F.

Hasil pengujian hipotesis pertama melalui uji t mengenai pengaruh lingkungan keluarga terhadap prestasi belajar menunjukkan  $t_{hitung}$  sebesar 1,1307 sedangkan  $t_{tabel}$  dengan  $\alpha$  0,05 menunjukkan angka 1,98806. Karena  $t_{hitung} < t_{tabel}$  maka lingkungan keluarga tidak berpengaruh terhadap prestasi belajar. Pengujian hipotesis kedua melalui uji t mengenai pengaruh minat belajar terhadap prestasi belajar menunjukkan  $t_{hitung}$  sebesar 4,9786 sedangkan  $t_{tabel}$  dengan  $\alpha$  0,05 menunjukkan angka 1,98806. Karena  $t_{hitung} > t_{tabel}$  maka minat belajar berpengaruh terhadap prestasi belajar. Pengujian hipotesis ketiga melalui uji F mengenai pengaruh lingkungan keluarga dan minat belajar terhadap prestasi belajar menunjukkan  $F_{hitung}$  sebesar 15,8048 sedangkan  $F_{tabel}$  dengan  $\alpha$  0,05 menunjukkan angka 3,094. Karena  $F_{hitung} > F_{tabel}$  maka lingkungan keluarga dan minat belajar berpengaruh terhadap prestasi belajar.

**ABSTRACT**

The aims of this research was to determine the influence of family environment to learning achievement, interest in learning to learning achievement, and the influence of family environment and interest in learning to learning achievement's student class XI Social of SMAN 14 Bandung. The method used was a survey method. The data were processed using the technique of multiple correlation analysis, whereas hypothesis testing is done by testing the significance of the correlation coefficient through the t test and F test.

The results of first hypothesis testing via t test about the effect of family environment on learning achievement showed  $t_{count}$  1.1307 while  $t_{table}$  with  $\alpha$  0.05 indicates the number 1.98806. Because of  $t_{count} < t_{table}$ , so the family had no effect on learning achievement. The second hypothesis testing via t test about the effect of interest in learning on learning achievement showed  $t_{count}$  4,9786 while  $t_{table}$  with  $\alpha$  0.05 indicates the number 1.98806. Because of  $t_{count} > t_{table}$ , so the interest in learning influence the learning achievement. The third testing hypotheses about the effect of family environment and interest in learning on learning achievement through F test showed  $F_{count}$  of 15.8048 while the  $F_{table}$  with a significance level of 0.05 indicates the number 3,094. Because of  $F_{count} > F_{table}$ , it can be said the family environment and interest in learning influence on learning achievements.

**Keywords:** Family Environment, Interest in Learning, Academic Achievement
